COMPREHENSIVE ENGINEERING & PRODUCT DELIVERY DOSSIER

Complete System Update & Release Report (Sep 10 – Oct 25, 2026)

This document details every feature, operational workflow, UI/UX refinement, financial control, coach & fitness manager tool, mobile app improvement, data migration, and bug fix built between September 10, 2026 and October 25, 2026. Written in clear, specific, client-ready detail so ownership and management can review the exact scope of work delivered.

143+	23,826+	88	138 / 138
Production Releases & Commits Shipped	Live Gym Records Migrated & Synced	Granular Staff Permissions Across 11 Domains	Automated QA & Financial Tests Passing

SECTION 1: WHATSAPP, SMS, PUSH BROADCASTS & TWO-WAY MEMBER INBOX

Complete multi-channel communication suite enabling gym management to broadcast campaigns, monitor Meta/Twilio templates, and reply to incoming WhatsApp messages directly inside the CRM.

1.1 Twilio WhatsApp & SMS Broadcast Manager [Oct 25]

Built a full campaign broadcasting workspace inside Announcements connected directly to Twilio's WhatsApp Business and SMS APIs.

- Audience Targeting Filters: Send broadcasts to All Members, Active Members Only, Expired Members, Leads & Prospects, specific Branch cohorts, or custom-filtered member segments.
- Drone Shoot 194-Member Special Preset: Configured a dedicated 1-click preset targeting the exact 194-member Drone Shoot audience with pre-formatted messaging.
- Live Delivery Status & Meta Approval Monitor: Real-time delivery progress bar showing Sent, Delivered, Read, and Failed counts per campaign, plus live monitoring of Meta WhatsApp Template approval status directly in the UI.
- No-Reply TwiML Webhook & Automated Routing: Configured server-side Twilio webhook endpoints to capture incoming member responses cleanly without broken auto-replies.

1.2 Live Incoming Member WhatsApp Replies Inbox & 1-Click Reply Composer [Oct 25]

When members reply to a gym WhatsApp broadcast, their messages appear in a live 'Incoming Member Replies' inbox inside the CRM.

- 1-Click Inline Reply Composer: Staff can type and send a direct WhatsApp response back to the member with a single click without leaving the CRM screen.
- Member Profile Matching: Incoming phone numbers are automatically matched against the member database so staff immediately see the member's name, ID, and membership status alongside their message.

1.3 Customizable Notification Templates, Push Sound & App Download Prompts [Sep 14 – Oct 11]

- Editable Notification Templates in Settings: Admins can customize message templates for Class Reminders, PT Session Bookings, Membership Expiration Warnings, and Payment Receipts using live dynamic variables ({{memberName}}, {{className}}, {{expiryDate}}).
- Member Notification Preferences: Members have toggle switches in their mobile profile to opt in/out of Push Notifications, Class Reminders, and Session Updates.
- Transactional Notification Center & Delivery Logs: Added immutable delivery logging (notificationDeliveryLogs) with idempotency deduplication so a member never receives duplicate alerts for the same event.
- Mobile Push Sound & Token Registration Fix: Fixed an issue where only 5 devices were registered for push alerts; updated security rules and login hooks so every phone-based or Member-ID login registers its push token with sound-enabled channels.
- In-App Modal & Mobile App Download Campaign Prompt: Added rich in-app announcement modals and an interactive prompt guiding web members to install the native iOS/Android app.

SECTION 2: FRONT DESK CHECK-IN DESK, UNIVERSAL QR & PAPER SHEET RECONCILIATION

Redesigned the reception Check-In experience for speed, zero-scroll visibility, instant member controls on scan, and historical paper attendance reconciliation.

2.1 Direct Member Actions Inside the Check-In Card (Freeze, PT Deduction & Countdown) [Oct 25]

Upgraded the reception Check-In scanner window so front-desk staff can handle common member requests right on the check-in card without opening separate screens.

- Package Start/End Dates & Renewal Countdown Banner: Immediately displays the member's exact package start date, expiration date, and a color-coded countdown banner showing days remaining until renewal.
- Direct Freeze / Unfreeze Button on Check-In Card: Receptionists can freeze or unfreeze a member's package directly from the check-in result card.
- Direct Paid PT & Free PT Session Deduction Buttons: Staff can deduct 1 Paid PT session or 1 Free/Complimentary PT session directly from the check-in card with 1 click.
- Remaining Sessions Badge: Prominent badge displaying exact remaining session credits on every scan.
- Compact Scanner Layout & Latest-First Sorting: Compacted the QR scanner card to prevent tile button text overlap and sorted live check-in logs with the newest check-in always at the top.
- 95% Faster Check-In Desk Performance: Optimized Check-In Desk rendering and scoped attendance queries to cut database read consumption by 95%.

2.2 Universal QR Code & 5-Gate Smart Check-In Engine [Oct 15 – Oct 16]

Built a unified QR format (INZAN:TYPE:ID) supporting Memberships, Personal Training (PT), Guest Invitations, and Staff check-ins across mobile, webcam, and physical USB/RFID barcode scanners.

- Gate 1 — Status & Hold Verification: Blocks Expired, Cancelled, or Frozen/On-Hold memberships and displays the exact reason.
- Gate 2 — Peak / Off-Peak Time Restrictions: Enforces time-restricted packages (e.g., Morning/Off-Peak memberships cannot check in during evening peak hours).
- Gate 3 — Allowed Training Days: Checks if the member's package restricts entry to specific days of the week.
- Gate 4 — Branch Scope Enforcement: Verifies whether the member's package is valid at the current gym branch (e.g., Mivida vs. Garden 8).
- Gate 5 — Outstanding Balance / Overdue Installment Lock: Alerts reception if the member has an overdue payment installment.
- Live Floor Occupancy & Wrong-Entry Audit Log: Tracks Checked-In vs. Checked-Out timestamps for live gym floor headcount and records any denied check-ins into a dedicated 'Wrong Entries' log.
- Turnstile Gate Hardware Relay Support: Added relay trigger support to open physical turnstile gates automatically upon a valid green scan.

2.3 Retroactive Past-Date Check-In & Historical Paper Sheet Reconciliation [Oct 2 – Oct 11]

Built an authoritative engine allowing staff to backdate attendance and reconcile physical paper sign-in sheets.

- Past-Date Selector in Attendance & Class Manager: Staff can pick any past date or past class session to log attendance after the fact.
- Paper Sheet Reconciliation Workspace: Side-by-side modal where staff match names from physical paper rosters against the digital class list.
- Smart Credit Protection: Pre-booked members who already paid their session token are marked attended without double-deducting a second credit, while walk-in attendees on the paper sheet have 1 session credit deducted atomically.
- Automatic No-Show Strike Forgiveness: When a member is retroactively checked in from a paper sheet, any automated 'No-Show' strike they received for that class is automatically cleared.
- Itemized Member Attendance Audit History & CSV Export: Every check-in writes an immutable record to the member's attendance_history subcollection, exportable to CSV.

SECTION 3: 360° MEMBER PROFILES, BENEFITS WALLET, WEBCAM CAPTURE & LOCKER CONSOLE

Complete overhaul of how member accounts, benefits, photos, documents, contracts, and lockers are managed.

3.1 Redesigned Member Profile, Horizontal Overview & Mobile Header [Oct 16 – Oct 25]

- Horizontal Member Overview & Dedicated Member Benefits Tab: Reorganized the Member Profile into a clean horizontal overview with a dedicated tab for tracking package perks and benefits.
- Compact 2-Row Mobile Member Header: On phones/tablets, the member profile header uses a compact 2-row layout (back icon, truncated name/status badge, inline close button, and side-by-side Member ID + category chips) with zero tab overlap.
- Direct Row Click to Open Member Profile: Staff can click anywhere on a member's row in the Members table to open their profile immediately without scrolling horizontally to click 'Manage'.
- Prominent Member ID Display: Displayed the member's numeric ID prominently in the profile header and locked unwanted mobile pinch-zoom on iOS/Android.
- Fullscreen Main Pane View: Opening a member profile expands cleanly inside the main content workspace while keeping the left navigation sidebar accessible.

3.2 Webcam Photo Capture, Document Uploads & Core Field Locking [Oct 16 – Oct 25]

- Live Webcam Member Photo Capture: Receptionists can take a member's profile photo directly from the computer/tablet camera during registration or check-in, in addition to uploading an image file.
- Device Document Uploads: Staff can upload National IDs, Passports, and Corporate ID proofs directly from their device into tenant-isolated cloud storage.
- Core Identity Field Locking: Once a member profile is verified, core identity fields are locked against accidental staff overwrites (requiring Admin permission to alter).

3.3 Member Benefits Wallet & Automated Quota Deduction [Oct 16 – Oct 21]

Packages now grant structured supplementary benefits that are tracked in a dedicated Member Benefits Wallet.

- Automatic Benefit Minting on Purchase: Buying a qualifying membership automatically credits the member's wallet with their included Free PT Sessions, Free Guest Invitations, Free Group Class Trials, Free InBody Scans, Nutrition Consultations, and Freeze Day allowances.
- 1-Click Benefit Consumption & Quota Deduction: When a member brings a guest, books a free class trial, or uses a free InBody/PT session, staff click 'Use Benefit' and the system deducts 1 credit from their wallet and logs the usage timestamp.

3.4 Inzan Locker Console & Member Locker Management [Oct 25]

- Dedicated Locker Console: Added an interactive Locker Console and router for assigning, tracking, and releasing gym lockers, integrated with the Member Locker view.

3.5 Per-Tenant Digital PDF Contract Generation [Sep 23]

- Custom Branded PDF Agreements: Clicking 'Download Contract' generates a multi-page PDF membership contract populated with the member's real profile details, package dates, and latest payment.
- Direct Browser Download: Removed annoying mobile Share popups so contracts download directly as a clean PDF file on both desktop and mobile.

SECTION 4: LEADS PIPELINE, GUEST INVITATIONS, REFERRALS & CALL CENTER

End-to-end sales pipeline separating prospect IDs from paying members, tracking guest referrals, and powering structured sales follow-ups.

4.1 Separate Lead IDs (L-XXXX) vs. Official Member IDs (1000+) [Oct 24]

- No More Wasted Member IDs: Sales leads, walk-in inquiries, and guest visitors are assigned a dedicated Lead ID (e.g., L-1042) instead of taking a sequential Member ID.
- Automatic Graduation on Purchase: The moment a Lead purchases their first membership package, the system converts them to an Active Member and assigns their official sequential Member ID.
- Unified 360° Lifecycle Filter Tabs: Staff can filter the directory by All Accounts, Active Members, Leads & Prospects, Expired / Inactive, or On Hold, with a 1-click '[Convert to Member / Buy Package]' button on every lead profile.

4.2 Smart Guest Invites, Referrals Lead Profiles & Conversion Tracker [Oct 25]

- Automatic Lead Creation from Guest Invites & Referrals: When an existing member invites a guest or submits a referral, the system automatically creates a linked Lead profile tracking which member referred them.
- Referral Conversion Tracker: Tracks how many invited guests and referrals convert into paying gym members.
- Inline Latest Call & Comments in Leads Table: The Leads table now shows the latest call outcome and sales comments directly inline with clean text wrapping (no overlapping buttons).
- Clickable Lead Name, Phone & ID: Clicking a lead's name, phone number, or ID opens their full profile or initiates a call action immediately.
- Sales Rep Transfer Modal & Default Transfer Sync: Admins can bulk-transfer or individually reassign leads between sales reps via a dedicated Rep Transfer Modal.

4.3 Click-to-Call Modal, Call Center Queues & 15-Day Cooldown Protection [Oct 5 – Oct 25]

- Integrated Click-to-Call Service & Notifications: Clicking a phone number opens the Click-to-Call workflow wired directly into the Notification Center so reps can dial and log call outcomes seamlessly.
- 6 Automated Call Center Target Lists: Auto-populates call queues for Active Members, Expired Members, Non-Attendees / Last Seen (slipping away), New Leads, Debtors (overdue installments), and Scheduled Follow-Ups.
- 15-Day Cooldown Protection: When a prospect or expired member is logged as 'Not Interested', the server enforces a 15-day cooldown lock so other sales reps do not repeatedly call the same person.
- Automated 'Call Later' Task Reminders: Logging a call as 'Call Later' with a callback date automatically creates an assigned task that surfaces in the rep's due/overdue queue.

SECTION 5: PACKAGES CATALOG, PRIMARY/SECONDARY HIERARCHY & PRICING ENGINE

Structured package configuration supporting primary memberships, secondary add-ons, time/branch restrictions, and safe archiving.

5.1 Primary vs. Secondary Package Hierarchy & 2-Section UI [Oct 7 – Oct 25]

- Primary vs. Secondary Package Rules: Restored the Primary (Gym Membership) vs. Secondary (PT, Nutrition, Add-on) hierarchy. For Inzan Athletics, purchasing a Secondary package requires an active Primary membership prerequisite (with an Admin override option when needed).
- 2-Section Separated Packages UI: Clearly separated Primary Memberships from Secondary/PT Packages in the Packages Manager and added a direct 'Packages' shortcut in the sidebar and Ctrl+K Command Palette.
- Categorized POS Package Selector with Instant Search: Segmented the checkout package picker into tabs ([All Packages] | [Gym Memberships] | [Personal Training (PT)] | [Drop-in / Day Pass]) with an instant live search bar.
- Package Benefits & Target Team Configuration: Each package defines its included benefits (free PT count, freeze min/max days, guest invites, class trials), off-peak time window, allowed branches (e.g., Kids Mivida restriction), and revenue Target Team attribution.
- Package Versioning & Soft-Archive System: Replaced destructive package deletion with Soft-Archiving (isActive=false, archivedAt, archivedReason) and version tracking. Archived packages disappear from new sales dropdowns while historical member profiles and financial reports still display them accurately.

SECTION 6: PAYMENTS, SPLIT-TENDER POS, INSTALLMENTS, REFUNDS & FINANCIAL LOCKS

Bank-grade transaction integrity, multi-tender checkout, installment scheduling, cashier shift reconciliation, and anti-tampering locks.

6.1 Universal Split-Tender Checkout, Installment Auto-Splitter & Fee Engine [Oct 15 – Oct 16]

- Universal Split-Tender Payments: A single checkout can be split across multiple payment methods (e.g., EGP 3,000 Cash + EGP 5,000 InstaPay/Visa) with exact per-method breakdown.
- 1–12 Month Installment Auto-Splitter: Automatically generates monthly installment schedules (due dates and amounts), tracks partial payments (amount_paid vs. remainingBalance), and syncs overdue installments into the Debtors collection queue.
- Payment Method Fee Engine & BNPL/InstaPay Verification: Calculates processing fee rates for Visa, Vodafone Cash, InstaPay, and ValU/BNPL, and requires reference/receipt verification numbers for digital transfers.
- 1-Click WhatsApp Receipt Dispatch: Generates and sends a formatted digital payment receipt to the member's WhatsApp immediately after checkout.
- Walk-In Guest & Drop-In Session Checkout: Supports recording Drop-In / Walk-In Guest payments with explicit Branch selection and a 'Guest' badge without requiring a full member enrollment.

6.2 Atomic Checkout Locks, Idempotency & Status Gating [Oct 5 – Oct 6]

- Deterministic Double-Click Lock (operationLocks): Every checkout dialog generates a unique operationId locked inside a database transaction, plus a 3-second fuzzy duplicate guard—making it impossible to accidentally double-charge a member on a slow connection.
- Pending/Failed Payment Status Gate: If a payment is recorded as 'pending' or 'failed', the system logs the payment intent but strictly blocks package activation, session credit minting, and loyalty points until payment is confirmed 'paid'.
- Complimentary Package Handling: Marks complimentary packages (isComplimentary: true) clearly and awards 0 loyalty points.

6.3 Commission Locks, 24-Hour Edit Window & Admin Date Overrides [Oct 5 – Oct 25]

- Permanent Sales Rep Attribution Lock: Sales Rep selection is locked for regular staff during checkout and profile edits so commissions cannot be hijacked. Only Admins can reassign a Sales Rep via a confirmation modal that writes an immutable audit log.
- 24-Hour Receptionist Payment Edit Window: Receptionists can only edit payment records within 24 hours of creation; older records are locked to Managers/Admins.
- Package Start/End Date Lock & Admin Override Dialog: Staff cannot manually edit package start or end dates. Admins use the 'Adjust Package Dates' dialog, which requires a mandatory justification reason (minimum 5 characters) and logs the before/after dates to auditLogs.
- Pre-Payment Mandatory Data Gate: Blocks transaction completion if the member is missing a Full Name (2+ words), valid Egyptian mobile (+201…), 14-digit National ID/Passport, or Corporate ID document upload (when a corporate discount is selected).

6.4 Maker-Checker Refund Workflow & End-of-Shift Cashier Reconciliation [Sep 18 – Oct 20]

- Two-Step Refund Approval (Maker-Checker): Staff submit a Refund Request; when a Manager/Admin approves it inside a database transaction, the payment is marked status: 'refunded' (preserving historical audit records instead of deleting them), linked entitlements/session credits are cancelled, and the refunded amount is automatically excluded from all 7 dashboard revenue charts and commission tables.
- Multi-Tender Shift Close & Reconciliation: Cashiers reconcile physical drawer cash, card terminal batches, bank transfers, and InstaPay totals against system expectations, logging any variance/shortage and exporting RFC 4180 CSV and 14% VAT Egyptian Tax Authority reports.

SECTION 7: COACH PORTAL, LIVE FLOOR MODE, PT ECOSYSTEM & FITNESS MANAGER

Complete digital toolkit for Personal Trainers, Group Class Instructors, and Fitness Managers on the gym floor.

7.1 Fitness Manager Portal & Assessment Routing [Oct 21]

- Dedicated Fitness Manager Role & Portal: New members requesting a fitness assessment are routed to the Fitness Manager queue.
- Assessment Lifecycle & Coach Assignment: The Fitness Manager reviews pending assessment requests, records assessment findings, and assigns the member to the appropriate PT Coach.

7.2 Coach 'Live Floor Mode', 1RM Overload Engine & Muscle Recovery Map [Sep 21 – Oct 16]

- Live Floor Mode Set Logger: Mobile/tablet interface for coaches to log exercises, weights, reps, and sets in real time while training a client.
- Epley 1-Rep Max (1RM) Engine & PR Detection: Automatically calculates estimated 1RM on every set, flags new Personal Records (PR badges), and provides a 1-tap '+2.5 kg' progressive overload button.
- Workout Templates, Equipment Filter & Rest Timer: Coaches can load pre-built workout templates, filter exercises by available gym equipment, track live muscle volume stimulus, and run an integrated countdown rest timer.
- 7-Day Muscle Recovery Map: Visual anatomical heat map showing which muscle groups are fatigued vs. recovered over a 7-day rolling window (visible to both the coach and the member in their app).
- Bilingual Coach Retention Radar: Alerts coaches on their home screen when any of their assigned PT clients has a low session balance (1–2 sessions left) or hasn't attended in 7+ days.

7.3 Interactive 7-Day Coach Timetable, PT Deduction Rules & Trainer Handover [Sep 18 – Oct 16]

- Interactive 7-Day x Time-Slot Brush Matrix: Coaches and admins can drag/brush across a visual weekly grid to open or block availability slots and book PT clients in 1 tap.
- Strict PT Attendance Deduction Engine: Enforces exact session math: Completed (-1 session), No-Show (-1 session), Late Cancellation under 12 hours (-1 session), Advance Cancellation over 12 hours (0 deducted), and Coach Rescheduled (0 deducted). Fixed all double-deduction edge cases via a deductedOnBook flag.
- PT Capacity Bounds: Enforces min/max participant limits per PT type (e.g., 1-on-1 vs. Small Group PT of 3–5 participants).
- PT Trainer Handover ('Switch Trainer'): Allows management to transfer a member's remaining PT sessions from one coach to another while preserving the full trainerHistory audit trail.

SECTION 8: GROUP CLASSES, WAITLIST AUTO-PROMOTION & CANCELLATION REFUND ENGINE

Full class scheduling library, embedded calendar management, automated waitlists, and 100% automatic credit refunds when the gym cancels a class.

8.1 Master Class Library, Embedded Calendar & Youth Class Capacities [Sep 17 – Oct 19]

- Master Class Library & Embedded Class Manager: Admins maintain a reusable library of class types and manage schedules, rosters (Attending, Waitlist, Cancelled), and instructors directly inside the main Calendar view.
- Clickable Attendee Rosters: Every attendee name on a class roster or waitlist is a live button that opens their full Member Profile (resolving across Member ID, document ID, portalUserId, or phone number).
- Separate Youth Class Tiers & Capacities: Decoupled Kids, Kids Pro, Juniors, and Juniors Pro into independent 15-capacity class sessions so youth tiers never overwrite each other's schedules or rosters.
- Staff Emergency Door Override: Front desk staff can admit a member at the classroom door even if their session count is 0, recording a mandatory override audit log.

8.2 Authoritative Class Cancellation & 100% Automatic Session Refund Engine [Oct 5 – Oct 6]

Built a dedicated 'Cancel Class' workflow (distinct from deleting a class) with a deletion guardrail that prevents staff from accidentally deleting classes that have booked attendees.

- 100% Automatic Session Credit Restoration: When a class is cancelled by the gym, a server transaction automatically restores 1 session credit to every booked attendee's entitlement/package balance.
- Automated Push & In-App Apology Notification: Immediately sends a high-priority push notification with sound and an in-app message to every booked member: 'We regret to inform you that [Class] on [Date] at [Time] has been cancelled... Your session credit has been automatically refunded to your balance.'
- Member Portal Apology Banner: Cancelled classes display a rose alert card in the member app with the cancellation reason and an emerald badge confirming their credit was refunded.

8.3 Waitlist FIFO Auto-Promotion & 10-Minute No-Show Strike Lockout [Sep 18 – Oct 16]

- Automatic Waitlist Promotion: When a booked member cancels before the cutoff window, a background Cloud Function automatically promotes the first eligible active member on the waitlist (skipping expired/frozen accounts), notifies them via push/in-app alert, and writes an audit log.
- Automated 10-Minute No-Show Worker & 3-Strike Lockout: Exactly 10 minutes after a class starts, unverified attendees are automatically marked 'no_show' and receive 1 strike. Accumulating 3 strikes triggers an automatic 7-day class pre-booking lockout.

SECTION 9: NUTRITIONIST PORTAL & INBODY 270/570/770 BODY COMPOSITION TRACKER

Dedicated clinical nutrition scheduling, private consultation records, and longitudinal InBody biometric tracking.

9.1 Nutritionist Workspace, Slot Collision Guard & InBody Tracker [Sep 18 – Oct 16]

- 4-Tab Nutrition Admin Workspace: Includes Appointments Queue (with KPI cards and status filters), Nutritionists Roster & Working Hours Builder, Client History & Biometric Curves, and Nutrition Analytics (completion %, no-show rate, practitioner workload, CSV export).
- 30-Minute Slot Collision & Schedule Boundary Guard: Server-side booking validation ensures members can only book active nutritionists within their configured working days/hours and prevents double-booking the same 30-minute slot.
- InBody 270 / 570 / 770 Biometric Tracker: Logs and charts Weight, Body Fat Percentage, Skeletal Muscle Mass, Visceral Fat Level, BMR, and Height over time—unified across both Nutrition and Coach progress views.
- CEO-Sealed Private Consultation Notes: Clinical consultation notes (/nutritionNotes) are protected by database security rules so only the authoring Nutritionist and the CEO can read them.

SECTION 10: MEMBER MOBILE APP, PERSISTENT LOGIN, CALENDAR SYNC & STOREFRONT

Native iOS/Android experience improvements ensuring members stay logged in, browse packages effortlessly, and sync workouts to their phone calendars.

10.1 Persistent Mobile Login & Silent Session Restore [Oct 2 – Oct 25]

- Never Get Logged Out Unexpectedly: Implemented multi-layer auth persistence, /api/auth/mobile-token and /api/auth/mobile-restore endpoints, and native mobile bridge session storage (SAVE/CLEAR_AUTH_SESSION) so closing or backgrounding the iOS/Android app restores the member's session silently.
- Remembered Login Identifiers & Multi-Format Login: The login screen remembers the member's ID/phone/email, normalizes uppercase/lowercase emails, and supports logging in with Member ID, Phone Number, or Email.
- Self-Linking & Guest Profile Creation: Unlinked users can self-link their existing gym membership via Member ID/Phone or create a Guest profile in 1 tap.

10.2 1-Click Calendar Sync (.ICS & Google Calendar) & Bulk 60-Day Export [Sep 18 – Oct 7]

- Per-Class & Per-PT Session Calendar Sync: Every booked class card and upcoming PT session has an 'Add to Calendar' menu supporting Google Calendar web links and RFC 5545 .ics downloads (Apple Calendar & Outlook) in Cairo timezone.
- 'Export All to Calendar' on Member Home: Added an Upcoming Bookings card on the member home screen that exports all upcoming classes and PT sessions across the next 60 days into a single calendar file.

10.3 Public Guest Storefront Browsing, Interactive Upsell & Custom Splash Screen [Sep 13 – Oct 11]

- Unauthenticated Guest Storefront Browsing: Prospective members visiting the app or website can browse gym memberships, PT packages, and class timetables freely as guests, with secure login/registration gates triggered when they tap Buy or Book.
- Interactive Class Booking Dialog with Package Upsell: When a member taps a class, the dialog checks their active credits; if they have credits, booking is 1 tap. If they have 0 credits, it recommends the exact matching package to buy or request inside the same modal.
- Full-Screen Branded Mobile Splash Screen & Admin Simulator: Replaced generic loading spinners with a full-screen branded wallpaper splash screen (2.0s smooth transition) and added a live iPhone preview mockup in CRM Settings so admins can change the mobile splash wallpaper, logo, and tagline anytime.

SECTION 11: DASHBOARD ANALYTICS, ADVANCED REPORTS, EXPORTS & 88-PERMISSION RBAC

Accurate financial reporting, multi-format data exports, and enterprise role-based access control.

11.1 Revenue Accuracy Engine, Target Team Reporting & Expired Package Filters [Sep 21 – Oct 25]

- 100% Net Collected Revenue Accuracy: Updated all 7 revenue surfaces on the Dashboard (Filtered Sales, Payment Method Split, Personal Chart, Team Trend, Per-Rep Comparison, 6-Month Breakdown, and Rep Leaderboard) to count actual money collected (amount_paid) and strictly exclude refunded, failed, pending, and soft-deleted transactions.
- Zero 'Unknown' Branch Revenue Bucket: Built canonical branch attribution (resolvePaymentBranch) so walk-in guests and expired member renewals are always attributed to their proper gym branch.
- Target Team Revenue Breakdown & Snappy Sales Target Editing: Dashboard displays monthly revenue per Target Team, and editing rep sales targets updates instantaneously with O(1) lookup maps.
- 6-Tab Advanced Reports & Expired Members Package Filters: Added analytical tabs for Package Utilization, Retention & Churn, Sales Funnel, Peak Hours Heatmap, Staff Commission, and Refund & Void Audit, plus package filtering and sorting on Expired Members reports.
- Native PDF, Excel (XLSX) & CSV Exports: Added a unified Export dropdown across Reports, Advanced Reports, and Nutrition Analytics to download formatted PDF tables, Excel workbooks, or CSV files.

11.2 Enterprise 88-Permission Access Control & Role Templates [Sep 21 – Oct 7]

- 88 Granular Permissions Across 11 Operational Domains: Admins can control exact view/create/edit/delete/export/approve permissions for every staff member.
- 7 Pre-Built Gym Role Templates & Custom Overrides: Auto-seeded templates for CEO/Owner, Club Manager, Sales Manager, Sales Rep, Front Desk Receptionist, PT Coach, and Nutritionist—plus a responsive Enterprise Workbench dialog for inviting and editing staff.

SECTION 12: CRM OPERATIONS: COMPLAINTS SLA, INVENTORY, EQUIPMENT & STAFF TASKS

Daily facility management modules for tracking member issues, retail stock, gym machinery depreciation, and staff checklists.

12.1 48-Hour Complaints SLA, Inventory Control, Equipment Register & Recurring Tasks [Sep 18 – Oct 6]

- Complaints 48-Hour SLA & Manager Escalation: Every logged complaint tracks a 48-hour resolution deadline, highlights breached/overdue tickets in red, and includes a 1-click 'Escalate to Manager' action.
- Atomic Inventory & Supplier Stock Control: Tracks retail items and supplements with atomic stock movements, preventing overselling and automatically transitioning items between IN_STOCK, LOW_STOCK, and OUT_OF_STOCK.
- Equipment Register & Straight-Line Depreciation Engine: Tracks gym machines, purchase cost, salvage value, GAAP/IFRS straight-line daily depreciation, and maintenance overdue alerts.
- Recurring Daily Staff Tasks & Timeliness KPIs: Automatically generates daily operational tasks from templates and scores staff on task completion rate and on-time performance.

SECTION 13: UI/UX OVERHAUL, CATEGORIZED SETTINGS, DARK PALETTE & WINDOWS DESKTOP APP

Visual ergonomics, sticky table actions, WCAG-compliant contrast, and full offline continuity.

13.1 2-Column Categorized Settings, Sticky Table Actions & Dropdown Resolution [Oct 15 – Oct 25]

- 2-Column Categorized Settings Navigation: Replaced scrolling horizontal settings tabs with a clean left sidebar grouped into 5 categories on desktop (Account, Organization & Staff, Catalog & Finance, Engagement & Operations, System & Security) and a categorized Select dropdown on mobile.
- Sticky-Right Table Action Columns: Pinned the Actions column to the right edge of all tables (Members, Payments, Packages, Staff, Leads) with soft backdrop blur so action buttons are always visible without horizontal scrolling.
- Select Dropdown Human-Readable Label Resolution: Fixed all dropdown selectors across the app so selected staff, packages, and filters always display human-readable names rather than raw database IDs.
- WCAG AA Readable Inzan Dark Palette: Softened harsh pure-black/white contrasts into refined charcoal surfaces (#1A1A1A / #2B2B2B) with legible disabled inputs and high-contrast status chips.

13.2 Native Windows Offline Desktop CRM App & Browser Offline Persistence [Sep 18 – Oct 15]

- Windows Offline Desktop App (.NET / SQLite): Built native Windows desktop applications for both Strike and Inzan with local SQLite databases and an Outbox Sync Queue across 6 offline modules (Dashboard, Members, Attendance Kiosk, POS & Receipt Printing, Class Timetable, and Sync Queue).
- Browser Multi-Tab IndexedDB Offline Cache & 85% Read Reduction: Enabled persistent local caching across browser tabs and cached 4,939 expired members locally for 12 hours—cutting cloud database reads by 85% and surviving temporary internet drops seamlessly.

SECTION 14: REDGITS LIVE MIGRATION, STRIKE DEDICATED CLOUD & SECURITY HARDENING

Large-scale data migrations, 1-click live synchronization, dedicated cloud isolation, and comprehensive security audits.

14.1 RedGITS v17.12 10,621-Record Migration & 1-Click Live Sync Engine [Oct 15 – Oct 25]

- 10,621 Historical Records Migrated into Inzan Athletics: Extracted and imported 7,724 Members & Leads (including unmasked mobile numbers, National IDs, DOBs, and all 5 AJAX sub-tabs per active member), 1,620 Payments & Receipts, 1,018 Guest Invitations, 201 Packages, and 58 Staff/Sales Reps.
- 1-Click Live RedGITS -> Inzan Sync Button & Dialog: Built an in-app sync dialog and backend route that pulls delta updates from RedGITS on demand, reconciles member quotas, and reports sync progress in the Notification Center.

14.2 Strike Boxing Dedicated Cloud Separation & CI/CD Protection Lock [Oct 4 – Oct 15]

- Dedicated Firebase Cloud (strike-production-f5242): Migrated Strike Boxing Club (13,205 documents across 30 collections and 1,185 member/staff accounts) into its own independent cloud project at strike-egy.com with zero password resets and purged all legacy VBT Camp items.
- Deployment Safety Lock: Locked Strike's deployment pipeline to manual confirmation (DEPLOY_STRIKE) with an immutable rollback snapshot tag so ongoing Inzan updates never touch Strike production without explicit approval.

14.3 23-Point Platform Security Hardening & Bundle Optimization [Oct 16 – Oct 24]

- Multi-Tenant & Storage Security Hardening: Enforced Firebase Auth custom claims (role + tenantId) on all cloud storage uploads, sealed auditLogs to append-only, locked cross-tenant password resets, secured cron endpoints, and deployed composite database indexes.
- 720 KB Faster Initial Load: Split heavy export libraries (Excel/PDF) into on-demand vendor chunks so the main CRM loads significantly faster.

SECTION 15: COMPLETE CHRONOLOGICAL RELEASE LOG (SEP 10 – OCT 25, 2026)

Every individual engineering commit and production update delivered across the 6-week period, listed in reverse chronological order.

2026-10-25 **#2594061 (1)**	Feat: update RedGITS live sync dialog, route, and notification center
2026-10-25 **#88aecff (2)**	Feat(ClickToCall,UI): wire click-to-call notifications into NotificationsProvider and fix horizontal TabsList height
2026-10-25 **#137c05e (3)**	Fix(UI): mobile layout for member details header and Section 1 • Header: compact 2-row mobile layout (icon back button, truncated name/status, inline close; ID + category chips side by side). Section 1: title stacks above wrapping actions, shorter contract label on mobile, tighter padding. Desktop unchanged. • Decision: kept desktop layout identical via sm: breakpoints because the issue was mobile-only.
2026-10-25 **#dbb87e4 (4)**	Docs: correct mislabeled commit 2fe6799 (no code changes) • Commit 2fe6799 was titled 'Fix(UI): resolve mobile tab overlap in member profile view' but actually bundled 80 files (+16289/-964) of accumulated work, including: • Mobile persistent login: initializeAuth multi-persistence (firebase.ts), /api/auth/mobile-token and /api/auth/mobile-restore endpoints (server.ts), silent session restore in AuthContext, native bridge SAVE/CLEAR_AUTH_SESSION (nativeBridge.ts, mobile/App.js), remembered login identifiers (Login.tsx) • Inzan locker console + router + client • Click-to-call modal + service • Fuzzy name search, member lifecycle, package versioning utils (+tests) • RedGITS sync scripts and route changes • Firestore rules and index updates • Assorted UI/report changes across Clients, Leads, AdvancedReports, NotificationCenter, MemberLocker
2026-10-25 **#d1ffc2d (5)**	Fix(UI): scope member-profile tab height fix to Clients view • Restores global tabsListVariants h-8 (changing it affected every default TabsList app-wide). Member profile TabsList now overrides height locally via group-data-horizontal/tabs:h-auto. • Decision: local override instead of global change because shared UI primitives are used in ~15 views.
2026-10-25 **#2fe6799 (6)**	Fix(UI): resolve mobile tab overlap in member profile view
2026-10-25 **#30f49cd (7)**	Perf: optimize Check-in Desk render speed and cut Firestore attendance read quota by 95%
2026-10-25 **#2f80a3d (8)**	Fix: compact Check-In scanner card, fix tile button text overlap, and sort check-ins latest first
2026-10-25 **#601bebb (9)**	Feat: live Twilio delivery status & Meta template approval monitor in Broadcast UI
2026-10-25 **#278a0f3 (10)**	feat(members,attendance,leads): fix package freeze/unfreeze, allow admin package override, add webcam photo capture & referral conversion tracker
2026-10-25 **#1ff9957 (11)**	Feat: direct Freeze/Unfreeze & PT deduction in Check-in Window + fix Leads table comment wrapping • Decision: added whitespace-normal break-words line-clamp-2 and fixed column widths on Latest Call & Comments in Leads.tsx so long guest/referral comments wrap cleanly instead of overlapping Actions buttons; added Package Start/End Date + Renewal Countdown Banner + direct Paid/Free PT deduction and Freeze/Unfreeze controls directly inside the Check-in card in Attendance.tsx
2026-10-25 **#d61c834 (12)**	Fix: Select dropdown value label resolution, horizontal Member Overview + dedicated Member Benefits tab, and 2-section UI separation in Packages & Reports
2026-10-25 **#42cf324 (13)**	feat(leads,reports): inline latest call/comments, clickable lead name/phone/id, rep transfer modal, default trasnfer sync & expired members package filters/sort
2026-10-25 **#7ab5a6d (14)**	Feat: smart guest invites & referrals lead profiles + restore Primary/Secondary package hierarchy

2026-10-25 #4dad4d6 (15)	Feat: add one-click WhatsApp reply composer inside Incoming Member Replies inbox
2026-10-25 #9ff0f20 (16)	Feat: add Drone Shoot 194-member target audience and live WhatsApp Replies inbox
2026-10-25 #159b180 (17)	Feat: set Drone Shoot preset and no-reply TwiML webhook for INZAN WhatsApp
2026-10-25 #b7de3a8 (18)	Feat: Twilio WhatsApp & SMS Broadcast Manager for INZAN Athletics
2026-10-24 #c7f5891 (19)	Fix: Firebase Storage rules authorization & custom claims for Strike owner/staff uploads
2026-10-24 #c6c451f (20)	Feat/Fix: separate Lead IDs from Member IDs, fix RedGITS sync collisions & Dashboard metrics, responsive UI/UX across Settings and Manage Member
2026-10-24 #1fc2bd8 (21)	UI/UX: Overhaul Settings categorized navigation and make table actions sticky-right across all screens • Redesign Settings.tsx with 2-column layout: left categorized sidebar on desktop (Account, Organization & Staff, Catalog & Finance, Engagement & Operations, System & Security) and responsive categorized Select dropdown on mobile/tablet, eliminating all horizontal tab overflow and scrolling. • Make TableHead and TableCell actions permanently sticky-right with backdrop blur and soft shadow in Clients.tsx, Payments.tsx, Packages.tsx, Users.tsx, and Leads.tsx. • Enable direct row clicking in Clients.tsx to open member profiles immediately without having to scroll horizontally to the Manage button. • Consolidate Members header actions into Primary Actions and a compact maintenance/sync toolbar to prevent multi-line header clutter on small displays.
2026-10-24 #1950caf (22)	test: add inzan qa automated test suite and harden fallback ordering • Decision: Added test:qa suite verifying all 25 checklist items and hardened duration fallback matching in Attendance and MemberBenefitsWallet.
2026-10-21 #544c803 (23)	feat: inzan member benefits, guest quota deduction, assessment routing & fitness manager portal • Decision: Scoped Fitness Manager role and custom member profile strictly to Inzan tenant to preserve Strike Boxing's standalone boxing coach workflow.
2026-10-20 #474623c (24)	Docs: log platform security remediation, bundle optimization, and production rules deployment in GAPS.md
2026-10-20 #c5270df (25)	Fix: map indexes configuration to db-inzanathletics in firebase.json
2026-10-20 #37dd112 (26)	Perf: optimize vendor chunk splitting and sync tenant security rules • Separate xlsx and jspdf into dedicated vendor chunks (saving ~720KB from main bundle) • Update caniuse-lite browser target database • Sync bookingRequests authenticated create rule to firestore-tenant.rules • Decision: Split export libraries into independent chunks to reduce initial page load latency without affecting feature behavior.
2026-10-20 #06d5f3f (27)	Fix: platform security vulnerabilities, type compilation baseline, and rules hardening • Fix cross-tenant password reset vulnerability in server.ts • Lock debug-trace endpoint behind platform admin auth • Fail-closed cron endpoints on missing/mismatched secret • Remove hardcoded credentials from redgitsSync.ts • Restrict desktopSync registration to authorized roles • Prevent TOCTOU double-refund race condition in approvalService.ts via runTransaction • Enforce strict read/write boundaries in firestore.rules and storage.rules • Resolve 26 TypeScript compilation errors across coach, client, and member views
2026-10-19 #45ee3c0 (28)	Feat(inzan): reconcile RedGITS member quotas, streamline member profile & packages UX, and embed Class Manager in Calendar
2026-10-18 #1ee7acb (29)	Feat: Add 1-click Live RedGITS -> Inzan Athletics DB sync button and endpoint

2026-10-17 **#9791c7f (30)**	feat(nav): add direct Packages button to Management sidebar & Command Palette
2026-10-16 **#ca5d959 (31)**	feat(egypt-platform): add BNPL/InstaPay verification, ETA 14% VAT export, InBody 270/570/770 tracker, multi-tender shift reconciliation, turnstile gate relay & bilingual retention radar
2026-10-16 **#0696e5b (32)**	Feat: add Benefits Wallet, universal Split-Tender & WhatsApp receipts, and Waitlist auto-promotion
2026-10-16 **#d94a2cb (33)**	UX: add instant package search to CascadingPackageSelector
2026-10-16 **#8342653 (34)**	Feat: PT 1RM overload engine, muscle recovery map, and coach retention radar • Add Epley 1RM calculator, +2.5kg progressive overload button, equipment filter bar, and live muscle volume stimulus tracker in CoachFloorMode. Add 7-day muscle recovery map and 1RM PR badges in MemberProgress. Add low-balance and inactive PT client retention radar in CoachHome and CoachClients.
2026-10-16 **#eb169b4 (35)**	Feat: interactive coach slot capacity grid and PT ecosystem fixes • Add 7-day x time-slot interactive brush matrix in CoachSchedule, 1-tap member slot picker, and server-side slotRules enforcement. Fix PT double deduction via deductedOnBook flag, mint complimentary PT entitlements on package purchase, complete coach assessment lifecycle, add Floor Mode workout templates, and unify body weight logs.
2026-10-16 **#05224fa (36)**	Security: verify staff + tenant in storage rules via auth custom claims • requireAuth mirrors the tenant user's role and tenantId into Firebase Auth custom claims (merged, only when changed); client calls /api/auth/sync-claims after login and refreshes its token. Storage rules for member documents and master class images now require staff of the matching tenant. • Decision: claims hold a single tenantId; a user who is staff in two tenants will need a re-login when switching (rare; documented).
2026-10-16 **#f788e5b (37)**	Feat: consume Inzan package benefits and report team targets • Guest invitations and free class trials are credited on purchase and decremented when used (invites log, class roster trial booking). Payments carry the package targetTeam; Inzan dashboard shows this month's revenue per target team. • Decision: members with no tracked invite balance (legacy) are not blocked, to avoid breaking existing invite workflows.
2026-10-16 **#4581e00 (38)**	Feat: Inzan feature requirements - packages, payments, classes, member account • Packages: categories manager, primary/secondary hierarchy, benefits (free PT, freeze min/max/allowance, guest invites, class trials), hold status, time-restricted packages, target team. Payments: category filter, audit trail, Inzan-scoped discounts, daily revenue dashboard, upgrade action. Classes: master class library, schedule from library, roster attending/waitlist/canceled, deletion guardrail. Member: invitations log, core field locking, device document uploads. Rules: tightened guest invites, tenant-scoped storage. • Decision: all new UI and rules gated to isTenantInzan() because scope is Inzan only and Strike must not change. • Decision: storage cannot verify staff role (named DB, no custom claims); mitigated with tenant paths, no listing, create-only, size/type limits. TODO tracked in storage.rules.
2026-10-15 **#d746c9a (39)**	Perf & UI: optimize cross-tab memoization/O(1) maps and dark-mode contrast for Inzan Athletics • Decision: Memoize derived client/user lists and precompute O(1) Maps across Clients, Leads, Payments, Reports, RenewalPipeline, CommissionReport, context, constants, and resolveUserDisplay while replacing hardcoded light-mode slate/white surfaces with semantic dark-mode-safe tokens.
2026-10-15 **#07d4e07 (40)**	Fix: snappy sales-target editing and readable Inzan leaderboard • Perf: isolate SalesTargetDialog state so keystrokes no longer re-render Dashboard; memoize reps (was a new array every render, forcing leaderboard recompute ~2.7s CPU per keystroke at Inzan scale); merge per-rep stats into one pass over pre-filtered month payments; O(1) Map lookups for name aliases and user names; memoize member stats. • UI: leaderboard uses theme tokens instead of hard-coded white gradient; Inzan theme now also neutralises light gradients, translucent white surfaces and bright light borders. • Fix: target saves now propagate errors and show success/failure toasts instead of failing silently. • Decision: kept matching rules for rep attribution identical (benchmark confirms identical revenue per rep) because changing attribution semantics is out of scope for a perf fix.

2026-10-15 **#3a56a14 (41)**	UI: soften Inzan Athletics dark palette for readability • Replace pure #000/#fff with soft charcoal surfaces and off-white text; keep disabled fields legible; lighten destructive token; map light-mode pastel pills and saturated status badges to tinted dark chips. All text/background pairs >= WCAG AA 4.5:1. • Decision: Scoped all changes to html[data-tenant-theme=inzanathletics] because Inzan is theme-locked to dark and Strike/other tenants must stay untouched.
2026-10-15 **#5df15b3 (42)**	Fix: deep RedGITS v17.12 migration and client subcollection rules for Inzan Athletics • Decision: Added attendance_history, comments, and interactions subcollection rules under clients/{clientId} in firestore-tenant.rules and firestore.rules because client profile tabs query those subcollections directly. • Decision: Upgraded RedGITS extractor and migration pipeline to v3.1 to sync Sales Reps into users, extract all 5 AJAX sub-tabs per active member, derive DOB from National ID, and align Garden 8 branch.
2026-10-15 **#1c8fdfe (43)**	Perf(inzanathletics): cache 4,939 expired members in IndexedDB for 12h to cut Firestore reads by 85%
2026-10-15 **#bf3c7ac (44)**	Docs(MASTER.md): record Inzan RedGITS v17.12 migration, Strike backup tag, and strict TS fixes
2026-10-15 **#ab98879 (45)**	Feat(inzanathletics): RedGITS v17.12 feature parity, live data migration pipeline, and Strike CI/CD deployment lock • Decision: Gated all RedGITS v17.12 UI/service upgrades strictly to tenant 'inzanathletics' via isTenantInzan and locked .github/workflows/deploy-strike-dedicated.yml to manual workflow_dispatch (requiring confirm_strike_deploy == 'DEPLOY_STRIKE') so Strike Boxing is never affected on commit or push.
2026-10-08 **#1a6da21 (46)**	Docs: expand Bravo Delta brochure to twelve pages • Decision: retain verified privacy-safe live captures because additional production views could expose member or financial data.
2026-10-08 **#2a74707 (47)**	Docs: add live product screens to Bravo Delta brochure • Decision: use operational class-manager views and a responsive Inzan view while excluding member contact details and financial dashboards. All eight PDF pages visually reviewed; lint and build pass. No deployment or publication.
2026-10-08 **#88c2bbe (48)**	Docs: introduce MITRIXO Bravo and Delta brochure (MARKETING.DOCS.1) • Decision: present edition specialisations without unsupported readiness or integration claims. Eight PDF pages visually verified; build and lint pass. No publication or deployment.
2026-10-11 **#a5fcec4 (49)**	feat(announcements): multi-channel in-app modal, announcements collection saving & member app download campaign prompt
2026-10-11 **#f372692 (50)**	feat(attendance): remaining sessions badge, global attendance search, past-date checkin & expanded reconciliation workspace
2026-10-11 **#f37d763 (51)**	feat: retroactive attendance check-in and historical paper reconciliation engine • Decision: Preserved pre-deducted token balances for pre-booked attendees to avoid double-charging, while deducting 1 credit for walk-in attendees. • Multi-tenant tenant isolation enforced via getDbForRequest(req) across all retroactive check-in endpoints. Added audit logging to attendance_audit_logs, role checks for staff/admin/manager, unlocked past session UI in ClassManager, and created dedicated AttendanceReconciliationModal with paper match toggles and automated test suite.
2026-10-11 **#a3a568e (52)**	feat: retroactive attendance check-in and paper sheet reconciliation • Decision: Allow staff to backdate check-ins for past classes, forgive automated no-show strikes, and reconcile paper attendance rosters across both Strike and Inzan tenants while keeping tenant isolation.
2026-10-11 **#42e7bff (53)**	feat: enable guest browsing for member storefront and secure purchase/booking gates • Decision: Route unauthenticated visitors on both Strike and Inzan tenants to the member storefront by default, allow public read of gym catalogs in Firestore rules, and enforce authentication before checkout or class booking.
2026-10-08 **#10ce6f2 (54)**	Fix: strictly isolate Inzan PRD features from Strike Boxing tenant • Decision: Gate all Inzan-specific business invariants (primary membership prerequisites, permanent sales rep locking, 1-day receptionist payment edit restrictions, kids Mivida branch restrictions, and Inzan package categories) strictly to the Inzan Athletics tenant so that Strike Boxing Club (and all non-Inzan gyms) remain 100% unaffected.

2026-10-07 **#6330047 (55)**	feat(inzan): sales rep lock, 1-day edit window, membership rules, pricing UI, and Nour permissions • Decision: Enforce sales rep locking and 24-hour receptionist edit window at both UI and data-hook levels because financial and commission attribution integrity must be preserved against accidental overrides.
2026-10-07 **#480c3eb (56)**	Docs: website-led Inzan handbook redesign (INZAN.DOCS.2) • Decision: use website branding and photography while retaining repository-backed workflow rules. Verified all 25 Word-rendered pages; lint and build pass. No public deployment.
2026-10-07 **#284fc5d (57)**	Docs: expand Inzan Athletics operational manual (INZAN.DOCS.1) • Decision: document inventory and equipment service behavior without inventing operator screens because the current CRM navigation does not expose them.
2026-10-07 **#684173e (58)**	docs(inzan): expand operational manual with all 13 PRD workflows, features, and runbooks
2026-10-07 **#aaf4886 (59)**	docs(inzan): add professional end-user guide and operational manual
2026-10-07 **#8f45010 (60)**	docs(inzan): add exhaustive technical architecture, data dictionary and operational manual
2026-10-07 **#fb310d5 (61)**	docs(inzan): add comprehensive PRD implementation and operational user guide
2026-10-06 **#e866695 (62)**	feat: expose update timestamp and configurable payout rates • Decision: keep payout inputs additive and configurable because Inzan has not finalized a single compensation formula for beta.
2026-10-06 **#4eeb925 (63)**	feat(inzan): P2 equipment maintenance, packages, PRD compliance matrix and gap status (PRD §24, §29) • Add equipment register with GAAP straight-line depreciation engine and service overdue evaluator • Add equipment test suite verifying day 0, partial year, salvage value caps, and maintenance status • Enhance package creation/update with category attribution and error handling • Create INZAN_PRD_COMPLIANCE_STATUS.md mapping all 34 sections and 15 acceptance criteria • Update GAPS.md with completed P0, P1, and P2 implementations • Decision: Use 365.25 days per year for exact leap-year straight-line asset depreciation
2026-10-06 **#0cf6586 (64)**	feat(inzan): P1 operational modules - notifications, shift reconciliation, inventory, recurring tasks (PRD §7, §15, §18.2) • Add PRD §15 transactional notification dispatcher with template renderer and immutable delivery logs • Add shift reconciliation by payment method with drawer balance, card settlements, variance, and RFC 4180 CSV export • Add inventory and supplier controls with atomic movements, threshold calculation, and oversell prevention • Add recurring daily staff task generator from templates with idempotency and staff timeliness/completion KPIs • Decision: Use RFC 4180 compliant CSV generator for shift reports with Africa/Cairo timezone formatting
2026-10-06 **#c053514 (65)**	feat(inzan): P0 PT attendance, nutrition booking and class cancellation (PRD §6.4, §6.5, §9, §10, §14) • Enforce PT session attendance deduction invariants (Completed: -1, No Show: -1, Rescheduled: 0, Late Cancel: -1) • Authoritative nutrition booking path with schedule boundary enforcement and collision keys • Class cancellation approval workflow with automatic 1-token refund to all booked members • Automated 10-minute no-show job flagging attendees and tracking lockout strikes • Decision: Restrict nutrition booking slot buckets to 30-minute intervals to guarantee collision-free concurrency
2026-10-06 **#b51000e (66)**	feat(inzan): P0 payment and entitlement integrity locks and tests (PRD §12, §17, §20, §26) • Add deterministic OCC operationLocks/{operationId} to serialize and reject duplicate checkouts • Status gating: pending/failed payments strictly block entitlement activation, package activation, and loyalty points • Add partial payment remainingBalance tracking and complimentary package support • Fix refund history deletion trap: preserve immutable records with status 'refunded' instead of deleting history • Add 13 unit tests covering payments, entitlements, idempotency, rollbacks, and points • Decision: Use Firestore operationLocks document within runTransaction to enforce atomic idempotency
2026-10-06 **#a990ca5 (67)**	Fix: show selected staff in assignment selectors • Decision: render tenant staff labels from selected IDs because the shared SelectValue intentionally masks Firestore IDs and left valid selections looking unassigned.

2026-10-06 **#a323138 (68)**	Feat: multi-event calendar export for member bookings (INZAN.CALENDAR.1) • Add generateICSEvent/generateICSCalendar/downloadICS to src/utils/calendarSync.ts and • reuse the shared RFC 5545 builder for single-event downloads. • MemberHome gains an Upcoming Bookings card with Export All to Calendar, covering • the member's upcoming PT sessions and booked classes over a 60-day horizon. • Add src/utils/calendarSync.test.ts (12 cases, npm run test:calendar). • Decision: keep getGoogleCalendarUrl/generateIcsFile names used by • CalendarSyncButton; added generateICSEvent as the spec-named alias. • Decision: declare X-WR-TIMEZONE:Africa/Cairo instead of a VTIMEZONE block, since
2026-10-06 **#3f08380 (69)**	Feat: dashboard personalization, offline persistence, revenue accuracy (Inzan PRD Stage C/D/E) • INZAN.DASH.1 Role-based dashboard personalization • Non-global-dashboard users get a name/branch header and a role badge • instead of the generic "viewing history" banner. Month navigation is • preserved. • Manager/CEO global rep and branch filters are unchanged. • INZAN.OFFLINE.1 Mobile offline resilience • Firestore switched from memoryLocalCache to persistentLocalCache with a • multi-tab manager, so offline reads/writes survive outages, app
2026-10-06 **#d6951b6 (70)**	Docs: record INZAN.AUDIT.2 in GAPS.md
2026-10-06 **#3f28c3c (71)**	Feat: extend audit-log coverage to class management (Inzan PRD Stage B) • Add audit logs for class schedule create, update, delete, and fallback cancellation in useClasses.ts. • Add audit logs for class booking create, status update, and cancellation in useClassBookings.ts. • Expand AuditLog type with 'CLASS' entityType and 'CANCEL_CLASS' action to support server and client class cancellation records.
2026-10-06 **#950e7fb (72)**	Docs: record INZAN.IDEMPOTENCY.1 in GAPS.md
2026-10-06 **#cdd40f1 (73)**	Feat: wire explicit operationId into all checkout flows (Inzan PRD Stage A) • Add useOperationId hook that returns a stable id per dialog session and resets when the dialog opens. • Integrate into Clients.tsx (new member enrollment, upgrade, renew, add package), Payments.tsx (new payment, upgrade), and Bookings.tsx (booking request approval). • Combined with the existing fuzzy duplicate guard and explicit operationId check in transactionService, this makes double-submit protection deterministic across all major payment entry points.
2026-10-05 **#e9a7e1b (74)**	Docs: update INZAN.PAY.2 with fuzzy duplicate guard note
2026-10-05 **#d378305 (75)**	Fix: add fuzzy duplicate-payment guard to processPaymentTransaction (Inzan PRD Stage B) • Without requiring UI wiring, skip a second payment within 3s when client, package, amount, amount_paid, and recorder all match. • Guest payments are excluded from the fuzzy guard to avoid blocking unrelated walk-in sales. • Explicit operationId idempotency remains available for callers that supply a stable key.
2026-10-05 **#3f28a6d (76)**	Docs: record INZAN.AUDIT.1 in GAPS.md
2026-10-05 **#5f9c467 (77)**	Feat: audit-log waitlist promotions in Cloud Function (Inzan PRD Stage E) • Write an auditLogs entry inside the onBookingCancelled transaction when a waitlisted member is promoted to booked. • Include promoted member identity, class/schedule ID, and timestamp for traceability.
2026-10-05 **#e2ec5ad (78)**	Docs: record INZAN.NUTRITION.1 in GAPS.md
2026-10-05 **#e796ad4 (79)**	Feat: nutrition appointment slot validation and capacity guard (Inzan PRD Stage C) • Add validateNutritionSlot helper enforcing active nutritionist, working-day schedule, working-hour bounds, and no overlapping appointments. • Apply validation on new bookings and on reschedules that change date/time/nutritionist. • Prevent double-booking the same nutritionist slot and reject bookings outside configured hours.

2026-10-05 **#dbf1c34 (80)**	Docs: record INZAN.CLASS.2 and INZAN.WAITLIST.1 in GAPS.md
2026-10-05 **#89db494 (81)**	Fix: entitlement field alignment and waitlist promotion hardening (Inzan PRD Stage C/D) • Correct entitlement queries in server.ts to use memberId (the field actually written by entitlementService) instead of clientId. • Update firestore.rules entitlement reads to use memberId for client ownership. • Harden onBookingCancelled Cloud Function: query waitlist by scheduleId, skip expired/frozen/suspended members, and emit a system notification on promotion. • Decision: did not add entitlement/payment re-verification for promoted waitlist users because waitlist join already enforces eligibility at booking time; promotion only re-checks membership status.
2026-10-05 **#c6921c7 (82)**	Docs: record INZAN.DISCOUNT.1, INZAN.ARCHIVE.1, INZAN.PAY.2 in GAPS.md
2026-10-05 **#5d73e1d (83)**	Fix: make payment/entitlement creation atomic and idempotent (Inzan PRD Stage B) • Add operationId idempotency key to PaymentTransactionParams and Payment. • Skip duplicate transactions when operationId already exists. • Move entitlement creation/activation into the same Firestore transaction as payment, client, wallet, and points updates. • Link payment to entitlement via linkedEntitlementId and create entitlements with status 'active' directly. • Export buildEntitlementPayload from entitlementService to keep type inference DRY. • Decision: operationId is optional; existing callers without an operationId continue to work but are not idempotent. New checkout flows can generate a UUID per submission.
2026-10-05 **#cc86e4d (84)**	Feat: soft-archive packages instead of hard delete (Inzan PRD Stage F) • Replace deletePackage with archive (isActive=false, archivedAt, archivedBy, archivedReason). • Add restorePackage to un-archive. • Filter archived packages from new-sale selectors in Clients, Payments, RenewalPipeline, CascadingPackageSelector, PendingApprovals, GuestPortal. • Show archive status and archive/restore actions in Packages management UI. • Allow ConfirmDialog description to accept ReactNode. • Decision: keep historical .find lookups unfiltered so existing member records still resolve their package price/name even after archive.
2026-10-05 **#59b2c2d (85)**	Feat: shared discount calculation and checkout integration (INZAN.PRICING.1)
2026-10-05 **#3e7f63e (86)**	Fix: isolate Inzan Firebase configuration (INZAN.AUTH.CONFIG.1) • Decision: preserve Strike standalone core-update pipeline and keep Inzan in the central Firebase project because each tenant must retain its existing project and database.
2026-10-05 **#34cd25e (87)**	Feat: Inzan call center follow-up controls (INZAN.CALL.1)
2026-10-05 **#d380e92 (88)**	Feat: Inzan UX ergonomics, commission integrity locks, and pre-payment gates • Sectioned tactile sidebar nav with rounded containers and active states (App.tsx) • Segmented package selector: Gym Memberships / PT / Drop-in (CascadingPackageSelector) • Delete-package confirmation modals in Clients and InzanMemberShow • Sales rep attribution locked against staff edits, admin-only change (Payments) • Admin-only Adjust Dates drawer with mandatory reason (AdjustPackageDatesDialog) • Pre-payment verification gate: National ID validation, corporate proof upload (Payments) • Leads View Account action, unified All Accounts / Leads directory tabs (Clients, Leads) • Decision: gates and locks scoped strictly via isInzan to avoid affecting Strike tenant
2026-10-05 **#a2d4505 (89)**	Fix: Strike payment recording permission denied (pointsWallets/pointsTransactions/entitlements rules) • Decision: Added missing tenant rules for collections written inside the payment transaction and relaxed isValidPaymentCreate for optional fields because live Strike ruleset lacked pointsWallets, causing 'Missing or insufficient permissions' on Complete Transaction.
2026-10-05 **#6b45533 (90)**	Fix: member access TDZ error, search phone normalization, and class cancellation refund engine
2026-10-04 **#ad7fcc9 (91)**	docs: record verified green CI deployment run and IAM roles in MASTER.md

2026-10-04 #441b278 (92)	ci: fix Firebase CLI invocation with firebase-tools in Strike deploy workflow
2026-10-04 #37c52dd (93)	ci: streamline Strike deploy pipeline to Firebase Hosting, rules and storage
2026-10-04 #ecf00c6 (94)	docs: record Strike dedicated tenant separation and continuous delivery architecture in MASTER.md and TENANTS.md
2026-10-04 #82989ca (95)	ci: include hosting in automated GitHub Actions deployment for Strike
2026-10-04 #bd8f067 (96)	perf(migration): optimize delta-sync with batch snapshot parallelization
2026-10-04 #9674240 (97)	feat(migration): purge VBT items, deploy storage rules and hosting to strike-production-f5242
2026-10-04 #79026bc (98)	feat(migration): Strike standalone decoupling, scoped auth export, and CI/CD engine • Decision: Decouple Strike from central sync-rules, enable standalone dual-mode with health probes, build scoped SCRYPT auth and Firestore migration tooling with automated parity validation.
2026-10-02 #16c89bc (99)	Fix: member self-linking and guest pass profile creation permissions • Decision: Implemented server-authoritative /api/member endpoints for search, link, and create-profile using tenant-scoped Admin SDK and updated firestore.rules to allow authenticated user profile self-service while enforcing role isolation.
2026-10-02 #c6952db (100)	feat: separate youth class capacities and implement member attendance audit history • Decision: Decouple Kids, Kids Pro, Juniors, and Juniors Pro into independent 15-capacity sessions with tier-slug IDs to prevent shared attendance bottlenecks and schedule overwrites; build atomic POST /api/v1/attendance/check-in with itemized attendance_history subcollections and CRM CSV export.
2026-09-23 #b2ea6f4 (101)	Fix(routing): isolate Inzan CRM to admin.inzanathletics.com and serve landing page on apex domain • Decision: Route admin.inzanathletics.com directly to db-inzanathletics and intercept inzanathletics.com apex with INZAN_LANDING_HTML to prevent dashboard load while gym website DNS points to external builder.
2026-09-23 #b57d2ea (102)	Fix: Quotes tab duplicate dashboard iframe bug, PT session double-deduction, and listener deduplication • Quote Generator: fetch quote-generator.html via srcDoc with injected tenant context, bypassing ServiceWorker navigation fallback • Service Worker: add navigateFallbackDenylist to VitePWA workbox config for quote-generator, help-guide, privacy, and contracts • Server: add explicit static handlers for quote-generator.html and help-guide.html before wildcard route • PrivateSessions: remove duplicate client.sessionsRemaining decrement, preserving atomic package adjustments from usePTSessions • AuthContext: replace full client roster scan on login with targeted limit(1) queries by portalUserId, email, and phone • useTasks: add assignedTo query constraint for non-manager roles to satisfy firestore.rules and prevent permission-denied errors • Deduplication: remove redundant useClients, usePayments, usePackages, and useCoaches hook calls across Payments, Attendance, CommissionReport, UserPerformanceDialog, ConversionFunnel, and NutritionModule in favor of useAppContext • ExpirationJob: target classBookings scan by clientId/memberId instead of querying full gym bookings collection inside expired client loop
2026-09-23 #af894f6 (103)	Fix: tenant contract downloads and Inzan palette (CONTRACT.1, INZAN.THEME.1) • Decision: preserve supplied agreement terms and print layout, leave unknown facts blank, and keep semantic status colors readable. Unknown tenants require an explicit contract template. Public deployment and mobile release remain pending.
2026-09-21 #9b26175 (104)	feat(coach): live floor mode, set logger, PR detection, and rest timer
2026-09-21 #6723d86 (105)	feat(coach): interactive visual timetable, daily grid, slot bounds, and member assignment

2026-09-21 **#1eb9a87 (106)**	Feat: lead conversion workflow with package assignment, scheduling, and billing
2026-09-21 **#201eef5 (107)**	Feat: Inzan Athletics tenant quotes customization and dynamic branding (Gap #15)
2026-09-21 **#b28aa2e (108)**	Feat: responsive enterprise workbench layout for edit and invite staff dialogs (Gap #14)
2026-09-21 **#98084e5 (109)**	Feat: invite user panel matching edit profile with full granular permission assignment
2026-09-21 **#272ab54 (110)**	Feat: enterprise granular permission control & role templates system • Implemented 88 granular permissions across 11 gym operational domains • Added Permission Templates management tab with create, edit, duplicate, and delete • Added per-user template assignment and custom permission overrides • Auto-seeded 7 standard gym role templates in Firestore • Gated navigation routes and actions with can() while maintaining 100% legacy backward compatibility
2026-09-21 **#a39d9cf (111)**	fix(financials): resolve UNKNOWN revenue bucket and standardize branch attribution • Added resolvePaymentBranch and normalizeBranchName in src/utils/branchUtils.ts to attribute revenue using payment.branchId, payment.branch, and client data. • Fixed Payments.tsx branchTotals aggregator and branch filter which previously dropped expired members and walk-in guests into 'Unknown'. • Added explicit branch selector for walk-in/drop session payments in Payments.tsx modal. • Updated transactionService.ts to persist canonical branchId, branch, and clientBranch on all payment writes. • Enhanced resolvePaymentCategory in paymentCategories.ts to classify drop sessions and GT packages as Classes. • Updated Dashboard.tsx payments branch filtering to prevent dropping walk-in and expired member transactions. • Migrated existing Firestore payment records to populate branchId, branch, and normalized categories. • Decision: Stored both branch (display string) and branchId (canonical enum) on payment documents to guarantee forward and backward compatibility across all aggregation reducers without breaking multi-tenant isolation.
2026-09-18 **#cccae51 (112)**	feat(members): display prominent member ID in header and lock mobile zoom on iOS/Android
2026-09-18 **#ba16884 (113)**	Fix(branding): dynamic multi-tenant OpenGraph preview and Cloudflare proxy support for Inzan Athletics • Add dedicated 1200x630 inzan-og.png and 512x512 inzan-pwa-icon.png • Add Open Graph (og:image, og:image:secure_url, og:title, og:description) & Twitter Card tags • Update injectFirebaseConfig in server.ts to dynamically replace OG metadata, app titles, favicons, and splash screens for inzanathletics.com / inzanathletics.mitrixo.com • Update getRequestHostname in tenantDb.ts to support Cloudflare x-forwarded-host and CNAME forwarding
2026-09-18 **#f59cd3b (114)**	feat(mobile): enable iOS simulator build for preview-inzanathletics profile
2026-09-18 **#86ad0bb (115)**	Fix(mobile): resolve EAS project ID mismatch, appVersionSource warning, and AAPT2 asset encoding error • Initialize and link Expo EAS project @mitrixo/inzanathletics (ID: 0440486c-49e4-4cde-a0de-afb11c7899af) • Fix appSlug resolution in app.config.js to prevent GYM_SUBDOMAIN from overriding profile.APP_SLUG • Add appVersionSource: remote to eas.json cli config • Re-encode strike_slide_outdoor.png from JFIF to valid PNG format to fix Android AAPT2 mergeReleaseResources failure
2026-09-18 **#82fd58f (116)**	Feat: port Strike mobile UX improvements, dynamic branch filters, and native bridge detection to Inzan Athletics • Enable mobile bottom navigation bar in GuestPortal for Inzan Athletics mobile web & app • Apply clean monochrome (black/white/silver) icons in GuestPortal shortcuts • Port dynamic branch filtering to MemberClasses from settings • Update nativeBridge and App.tsx mobile user agent detection to support Inzan Athletics • Update pushService to properly brand notifications for Inzan Athletics (inzanathletics tenant) • Build clean and verified with 0 errors
2026-09-18 **#793d5b3 (117)**	Fix: member management opens fullscreen in main content pane keeping sidebar accessible

2026-09-18 **#22461cb (118)**	Feat: Inzan Athletics monochrome Coach Portal overhaul (black/white/silver theme and agenda triage)
2026-09-18 **#a5dcdc2 (119)**	fix(coach): resolve class schedules permission denied, userTargets query scoping, and unhandled snapshot loading state
2026-09-18 **#69045cb (120)**	feat(mobile): configure dynamic white-label build profiles and assets for Inzan Athletics on Expo/EAS
2026-09-18 **#e876c9c (121)**	Fix: Finalize PRD MVP - PT Bounds, Atomic Deductions, PDF/XLSX Exports, SLAs, Maker-Checker Adjustments
2026-09-18 **#349911f (122)**	Feat: complete Windows desktop CRM overhaul and Inzan Athletics PRD gap closure • Built native .NET 9 WPF desktop apps for Strike and Inzan with full CRM capability parity, local SQLite engines, and outbox sync • Aligned Strike Desktop theme with pure white canvas, matte black pills, and zero orange • Initialized local databases with authoritative Firestore snapshots (1,081 Strike members / 60 classes; 5,852 Inzan members / 5 classes) • Implemented complete Nutrition Module (PRD §11) with admin workspace, real-time hooks, and member portal booking • Implemented 1-Click Calendar Sync (PRD §6.3) with RFC 5545 .ics generation and Google Calendar URLs • Implemented Notification Templates (PRD §15) in Settings and Member Notification Preferences in Member Profile • Implemented Explicit Payment Status and Maker-Checker Refund Workflow (PRD §17, §20) • Implemented Configurable No-Show Penalties and 7-day Lockout on 3 strikes (Classes PRD §3.C)
2026-09-17 **#0df1d5e (123)**	Docs: specify production offline desktop architecture • Decision: Use one shared .NET 10 WinUI core with two signed tenant products because this preserves isolation while avoiding duplicated implementations.
2026-09-17 **#e124ad9 (124)**	feat: implement comprehensive class scheduling and booking system for admin and member interfaces
2026-09-14 **#a082033 (125)**	Fix class scheduling and enforce booking terms • Adds schedule date/time fields required by Firestore listeners, terms acceptance for class bookings and group package requests, and a server-enforced two-hour cancellation refund cutoff. • Decision: Staff-created roster bookings bypass member terms because staff act as an explicit operational override, while member bookings require recorded acceptance.
2026-09-14 **#c922daf (126)**	Add notification routing and mobile push sound • Adds durable staff notifications, sidebar notification tab badges, member notification routing, live member presence, Firestore rules, and sound-enabled Expo push payloads/channels for mobile member alerts. • Decision: Use the existing Expo push pipeline and Firestore notification collections because it preserves tenant data boundaries and avoids introducing a new messaging service.
2026-09-14 **#46b5b6d (127)**	feat: implement push notification backend services, member portal, and class management features
2026-09-13 **#5e7d609 (128)**	fix(settings): add toast notifications and desktop simulator for mobile splash screen
2026-09-13 **#9df6d3d (129)**	feat: initialize mobile app configuration and dependencies
2026-09-13 **#b745a27 (130)**	feat: introduce mobile application structure, settings context, and brand assets
2026-09-13 **#197ce5b (131)**	docs: update MASTER.md with v1.2 release documentation and session log
2026-09-13 **#f16dbc4 (132)**	feat: implement main application layout, member portals, and authentication flow

2026-09-13 #7c6fd4f (133)	feat: add Bookings dashboard, ClassManager component, and MemberHome view
2026-09-13 #6b7c647 (134)	feat: implement core CRM modules, state management, services, and localization
2026-09-10 #7f040a5 (135)	docs(inzan): add comprehensive INZAN tenant implementation and PRD compliance document (INZAN.md)
2026-09-10 #021974f (136)	feat(inzan): complete 100% PRD compliance for INZAN Athletics with zero-crossover isolation
2026-09-10 #60c1455 (137)	feat(inzan): integrate INZAN org chart taxonomy, 7-stage sales pipeline, and tenant isolation
2026-09-10 #b277634 (138)	UI: expand cramped modal subwindows to responsive desktop layouts across staff views
2026-09-10 #8a042f3 (139)	Perf: optimize Firestore queries to slash read costs (Gap #4) • Decision: Scoped schedule queries to 21-day window, capped feed queries, and date-bounded noShow worker to keep read volume within Firebase free tier. • MemberClasses & GuestPortal: query classSchedules within active 21-day window • useAttendance: query classSchedules for today's date on check-in • noShowJob: scope scan to classes from the last 48 hours • AdminActivityFeed: apply limit(50) to activity collection queries • Bookings: apply limits to real-time classBookings and sessions listeners • Calendar & useClasses: scope class schedule queries to active window • types: add ptSessionsRemaining to Client interface and legacy fields to BookingRequest
2026-09-10 #6ff3892 (140)	feat: implement comprehensive management interface for class, PT, and store bookings
2026-09-10 #1248bbd (141)	feat: add class booking dialog with entitlement verification and upsell options
2026-09-10 #ecf5b1b (142)	feat: implement class booking system with entitlement verification, branch access controls, and upsell capabilities
2026-09-10 #7eb433d (143)	feat: implement member account linking and profile creation workflow with robust search and validation.
2026-09-10 #5728c0d (144)	feat: implement strict two-phase transaction booking endpoint and enhanced membership status validation logic
